Re: **LPC-663 CCDD Certification: 2023 CDOT NCI Green Alley Program**
NCI Central Area, Ward 32, Alley 22-CP#53

Huff & Huff, Inc. a subsidiary of GZA, Inc. (H&H/GZA) provided services in support of a Form LPC-663 for the anticipated spoils to be generated as part of the 2023 Neighborhood Capital Improvement (NCI) Green Alley Program, NCI Central Area, Ward 32, 22-CP#53 alley bounded N. Wilmont Avenue to the north, N. Leavitt Street to the east, N. Milwaukee Avenue to the south, and N. Oakley Avenue to the west, in Chicago, Cook County, Illinois (Project Area). A supporting narrative description of the due diligence performed, and analytical testing are attached to the LPC-663 form.

Seven (7) potentially impacted properties (PIPs) were identified in relation to the Project Area, based on environmental due diligence, including review of a database report (records search), historical aerial photographs, and site reconnaissance. Based on due diligence and field observations, this LPC-663 Form is considered appropriate for assessing Project Area spoils for suitability of disposal at a Clean Construction or Demolition Debris (CCDD) or Uncontaminated Soil Fill Operation (USFO) facility. Five (5) soil borings were advanced within the Project Area, corresponding to the areas of planned excavation/soil disposal, as depicted on the figures included in **Attachment A**. Soil borings D-1 through D-5 were advanced on December 13, 2023, to depths of approximately 8 feet below ground surface (bgs), and representative soil samples from each boring were collected and submitted for laboratory analysis.

Samples were screened with the photoionization detector (PID) meter, with readings at background with levels of 0.0 parts per million (ppm) for each sample interval. Based on the identified PIPs, on-site observations, and PID screening results, samples D-1 (0-4), D-1 (4-8), D-2 (0-4), D-2 (4-8), D-3 (0-4), D-3 (4-8), D-4 (0-4), D-4 (4-8), D-5 (0-4), and D-5 (4-8) were analyzed for one or more of the following parameters: volatile organic compounds (VOCs), polynuclear aromatic hydrocarbons (PNAs), total Resource Conservation and Recovery Act (RCRA) metals, Toxicity Characteristic Leaching Procedure (TCLP) chromium, TCLP lead, and soil pH.

The laboratory did not report detectable concentrations of VOC constituents in the samples analyzed, indicating that samples D-1 (0-4), D-2 (4-8), D-3 (0-4), D-4 (4-8), and D-5 (0-4) achieve the respective VOC Maximum Allowable Concentration (MAC) values for disposal at a CCDD or USFO facility.

Ten (10) samples were analyzed for PNAs. Samples D-2 (0-4), D-2 (4-8), D-3 (0-4), D-4 (0-4), and D-5 (0-4) had one or more PNA detections. Samples D-2 (0-4), D-3 (0-4), and D-4 (0-4) had one or more PNAs which exceeded one or more MAC values. The laboratory did not report detectable levels of PNAs in the remaining samples, indicating that D-1 (0-4), D-1 (4-8), D-2 (4-8), D-3 (4-8), D-4 (4-8), D-5 (0-4), and D-5 (4-8) achieve the respective PNA MACs for disposal at a CCDD or USFO facility.

An Equal Opportunity Employer M/F/V/H

Ten (10) samples were analyzed for total RCRA metals, as well as chromium and lead via the TCLP method. Each sample analyzed had one or more total metals detections, including arsenic, barium, cadmium, chromium, lead, mercury, and selenium.

In order for a metal to be considered to exceed the MAC value, the total, TCLP, and Synthetic Precipitation Leaching Procedure (SPLP) results (with the exception of arsenic), must be found to exceed the default and alternative MAC Values.

The following samples are considered to contain metals exceeding the default and alternative MAC values or a Tier I Soil Remediation Objective (SRO) for Residential exposure pathway (Ingestion or Inhalation):

- D-2 (0-4): lead, mercury, and selenium
- D-4 (0-4): lead
- D-5 (4-8): arsenic

The following samples contain total metals concentrations exceeding the Tier I Construction Worker (CW) SRO for the Ingestion and/or Inhalation Exposure pathway:

- D-2 (0-4): mercury

The remaining metals data indicate that only one or two of the detected parameters (of the total, TCLP, and/or SPLP results) in a given sample resulted in an exceedance.

Samples from each boring were analyzed for soil pH. Samples D-1 (0-4), D-1 (4-8), D-2 (0-4), D-2 (4-8), D-3 (0-4), D-3 (4-8), D-4 (0-4), D-4 (4-8), D-5 (0-4), and D-5 (4-8) had pH results ranging from 7.13 to 8.79, each within the acceptable range (6.25 to 9.00) for disposal at a CCDD or USFO facility. Samples were screened with the PID meter, with readings at background levels of 0.0 ppm for each sample interval screened.

Spoils generated from the Project Area are certified for disposal at a CCDD or USFO facility, within the following areas as presented in the table below.

According to Illinois Department of Transportation (IDOT) Standard Specifications for Road and Bridge Construction, Section 669.05 (Removal and Disposal of Regulated Substances – Contaminated Soil and/or Groundwater Management and Disposal), the following areas shall be managed as follows:

669.05 Regulated Substances Management and Disposal

(a) Soil Types: *"Soil Analytical Results Exceed Most Stringent MAC. When the soil analytical results indicate detected levels exceed the most stringent maximum allowable concentration (MAC) for chemical constituents in soil established pursuant to Subpart F of 35 Ill. Adm. Code 1100.605, the soil shall be managed as follows:"*

Spoils generated from D-3 (4-8') are classified as 669.05(a)(2):

- "*When analytical results indicate inorganic chemical constituents exceed the most stringent MAC but do not exceed the MAC for a Metropolitan Statistical Area (MSA) County identified in 35 Ill. Admin. Code 742 Appendix A. Table G, the excavated soil can be utilized within the right-of-way as embankment or fill, when suitable, or managed and disposed of at a clean construction and demolition debris (CCDD) facility or an uncontaminated soil fill operation (USFO) within an MSA County provided the pH of the soil is within the range of 6.25 - 9.0, inclusive*."
- Soils Management Summary (per Article 669.05 of the IDOT Construction Manual)*: "Soil can be used on site, disposed of at a clean construction demolition debris (CCDD) or uncontaminated soil fill operation (USFO) within an MSA County."*

Spoils generated from D-1 (0-4'), D-2 (0-4.5'), D-3 (0-4'), D-4 (0-4'), and D-5 (4-8') are classified as 669.05(a)(5):

- "*When the Engineer determines soil cannot be managed according to Articles 669.05(a)(1) through (a)(4) above and the materials do not contain special waste or hazardous waste, as determined by the Engineer, the soil shall be managed and disposed of at a landfill as a non-special waste*."
- Soils Management Summary (per Article 669.05 of the IDOT Construction Manual)*: "Disturbed soil must be managed and disposed of at a properly permitted landfill as non-special waste. The Contractor must provide a signed letter specifying the proposed disposal facility and documentation the landfill is permitted to accept the regulated soil. The Contractor is also responsible for providing the Waste Material Profile and Generator's Non-Special Waste Certification."*

Spoils generated from the remainder of the Project Area are certified for disposal at a CCDD facility or USFO facility, within the following areas:

- Within Chicago corporate limits
- A populated area in a Metropolitan Statistical Area (MSA) excluding Chicago
- A populated area in a non-MSA county
- A non-populated area

Based on waste/debris observed in the urban fill material for borings D-1 (0-4'), D-2 (0-4.5'), D-3 (0-4'), and D-4 (0-1'); results for various PNAs; and results for arsenic, lead, and/or mercury for one or more of samples D-2 (0-4), D-4 (0-4), and D-5 (4-8), the following areas are within a **CCDD Exclusion Area**:

- D-1: from ground surface to approximately 4 feet bgs
- D-2: from ground surface to approximately 4.5 feet bgs
- D-3: from ground surface to approximately 4 feet bgs
- D-4: from ground surface to approximately 4 feet bgs
- D-5: from approximately 4 feet bgs to the maximum anticipated excavation depth

Based on analytical results for mercury from sample D-2 (0-4), a **Construction Worker Caution Area (CWCA)** has been established for the following area, as discussed in the CCDD Narrative.

- D-2: Construction Worker Inhalation (**mercury**) from ground surface to approximately 4.5 feet bgs

Should conditions within the Project Area change, such as unusual staining, odors, or if loads become rejected, additional analytical assessment may be required for final disposition of spoils from this Project Area. Elevated PID readings may also result in rejected loads.

III. Basis for Certification and Attachments

For each item listed below, reference the attachments to this form that provide the required information.

a. A Description of the soil sample points and how they were determined to be sufficient in number and appropriately located 35 Ill. Adm. Code 1100.610(a)]:

Seven (7) potentially impacted properties (PIPs) were identified from the database review, historical aerial photographs, or site visit in connection with the Project Area. A total of five (5) soil borings were advanced within the Project Area on Dec. 13, 2023. Soil borings were advanced to provide coverage of proposed excavation areas, PIPs, and to characterize urban fill.

b. Analytical soil testing results to show that soil chemical constituents comply with the maximum allowable concentrations established pursuant to 35 Ill. Adm. Code Part 1100, Subpart F and that the soil pH is within the range of 6.25 to 9.0,including the documentation of chain of custody control, a copy of the lab analysis; the accreditation status of the laboratory performing the analysis; and certification by an authorized agent of the laboratory that the analysis has been performed in accordance with the Agency's rules for the accreditation of environmental and the scope of the accreditation [35 Ill. Adm. Code 1100.201 (g), 1100.205(a), 1100.610]:

Borings D-1 through D-5 were analyzed for one or more of: VOCs; PNAs; RCRA metals; TCLP metals; and soil pH. Areas corresponding to each soil boring achieved the MACs, with soil pH at acceptable range for CCDD disposal, except for the CCDD Exclusion Areas as shown in the attached documentation. Refer to attached narrative/lab report 23120399 for details.

2023 CDOT NCI Green Alley Program, NCI Central Area, Ward 32, Alley 22-CP#53

III. Basis for Certification and Attachments

Explain the basis upon which you are certifying that the soil from this site is uncontaminated soil.

This form pertains to excavated soils generated from alley improvements to the alley bounded by N. Wilmont Avenue to the north, N. Leavitt Street to the east, N. Milwaukee Avenue to the south, and N. Oakley Avenue to the west, in Chicago, Cook County, Illinois (Project Area). The alley's location is displayed in **Attachment A**. The latitude/longitude (decimal degrees) in the approximate center of the Project Area is 41.91495, -87.68372 The total depth of excavation is expected to terminate within 8 feet below ground surface (bgs).

Seven (7) potentially impacted properties (PIPs) were identified near the Project Area, based on environmental due diligence, including review of regulatory database listings, historical aerial photographs, and a site visit in connection with the Project Area. **Attachment A** includes figures depicting the Project Area, nearby identified sites, soil boring locations, and soil disposal recommendations. The analyses conducted and results are summarized at the end of this narrative. The laboratory analytical report is included in **Attachment B**. The Project Area database search is included in **Attachment C** and the boring logs are included in **Attachment D**.

Historical Aerials

Publicly available historical aerial photographs were viewed online prior to the field reconnaissance including the following years: 1938, 1952, 1962, 1963, 1972, 1973, 1983, 1984, 1988, 1999, 2002, 2005, 2007, 2009, 2010, 2011, 2012, 2014, 2015, 2017, 2019, and 2021. In the 1938 aerial photograph, the Project Area (alley) is depicted as fully developed with dense residential structures adjacent to the north, as well as potentially commercial mixed-use areas along N. Milwaukee Avenue to the south and N. Oakley Avenue to the West. The subsequent aerial photos from 1952 to 1988 appear similar to the 1938 aerial photograph. The 1999 aerial photograph depicts residential structures in place of the commercial building adjacent to the northwest of the Project Area. No major changes were observed from 1999 to 2007. The 2009 through 2017 aerial photograph depict development to the properties adjacent to the southeast of the Project Area. The subsequent aerial photographs depict the Project Area as essentially unchanged.

Records Search

A database search for the Project Area was conducted by Environmental Risk Information Services (ERIS) on December 4, 2023. Twenty-seven (27) sites were identified within 250 feet of the Project Area and are summarized in the following table. Sites were reviewed within 250 feet radius of the Project Area to identify sites proximate to the Project Area. Sites located over 250 feet from the Project Area are considered non-PIPs based on separation distance and are not discussed. Sites that are not adjacent to the Project Area are included in **Table 1**, but are not discussed further, unless considered

warranted based on the nature of the site and/or the database reviewed. Additionally, sites which are listed in exclusively the PERMITS CHICAGO database for Air Pollution Control Permits (APCP) with regard to installation or inspection of restaurant-related equipment (e.g., exhaust hood, grease filters, boiler/furnace) and/or architectural surface cleaning (i.e., masonry/tuckpointing) are considered non-PIPs based on the nature of the listing and are not discussed. The ERIS database report which lists each of the sites in the table below is included in **Attachment C**.

Field Observations and Analytical Summary

On December 13, 2023, H&H/GZA collected representative soil samples from five (5) soil borings within the Project Area, as displayed on the figures included in **Attachment A**. Soil borings D-1 through D-5 were advanced to approximately 8 feet bgs. During logging, the soils were assessed for the presence of fill material or the presence of odors/staining. Boring logs

which provide information on the observed soils are included in **Attachment D**. Fill material with waste items or debris (e.g., cinders, coal, porcelain, wood) was observed in borings D-1, D-2, D-3, and D-4 within the horizons identified below. There was no fill material containing waste items or debris noted in the remaining boring advanced (D-5). Odors were not identified during the logging process.

- D-1: Fill with sandy silt and lean clay; some to trace **coal**; trace gravel, (0-4')
- D-2: Fill with silt with sand and lean clay; trace gravel, **cinder**, **coal**, **wood** (0-4.5')
- D-3: Fill with lean clay; trace gravel, **coal**, **porcelain** (0-4')
- D-4: Fill with sandy silt; trace gravel, **coal** (0-1')

Samples were screened with the photoionization detector (PID) meter, with readings at background levels of 0.0 parts per million (ppm) for each sample interval screened. Based on historical consideration of urban fill material, PID screening results, and on-site observations, samples were analyzed for specific parameters, as presented in **Table 2**.

RCRA Metals

Ten (10) samples were analyzed for total Resource Conservation and Recovery Act (RCRA) metals, as well as chromium and lead via the Toxicity Characteristic Leaching Procedure (TCLP) method. Each sample analyzed had one or more total metals detections, as presented in **Table 4**, including arsenic, barium, cadmium, chromium, lead, mercury, and selenium.

In order for a metal to be considered to exceed the MAC value, the total, TCLP, and Synthetic Precipitation Leaching Procedure (SPLP) results (with the exception of arsenic), must be found to exceed the default and alternative MAC Values.

The following samples are considered to contain metals exceeding the default and alternative MAC values or a Tier I Soil Remediation Objective (SRO) for Residential exposure pathway (Ingestion or Inhalation):

- D-2 (0-4): lead, mercury, and selenium
- D-4 (0-4): lead
- D-5 (4-8): arsenic

The following samples contain total metals concentrations exceeding the Tier I Construction Worker (CW) SRO for the Ingestion and/or Inhalation Exposure pathway:

- D-2 (0-4): mercury

The remaining metals data indicate that only one or two of the detected parameters (of the total, TCLP, and/or SPLP results) in a given sample resulted in an exceedance.

Spoils generated from the remainder of the Project Area are certified for disposal at a CCDD facility or USFO facility, within the following areas:

- Within Chicago corporate limits
- A populated area in a Metropolitan Statistical Area (MSA) excluding Chicago
- A populated area in a non-MSA county
- A non-populated area

Discussion of CW Caution Area(s)

Based on analytical results for mercury from sample D-2 (0-4), a **Construction Worker Caution Area (CWCA)** has been identified for the following area(s), as depicted in the attached figures.

- D-2: Construction Worker Inhalation (**mercury**) from ground surface to approximately 4.5 feet bgs

Inhalation Exposure

Mercury

Sample D-2 (0-4) had a total mercury result of 7.6 mg/kg, which exceeds the MAC Value for total mercury (0.89 mg/kg), as well as the Tier I SRO for CW Inhalation exposure (0.1 mg/kg). The Inhalation exposure route for mercury applies where elemental mercury is considered a contaminant of concern. Elemental mercury was not identified as a contaminant of concern for the Project Area. However, based on the concentration of total mercury in the fill material (0-4.5') associated with the D-2 boring, there is a potential for concentrations of elemental mercury and/or the volatile fraction of mercury present in the material in the vicinity of the soil boring.

Based on the reported concentration of total mercury in fill material (0-4.5') for D-2 , which exceeds the MAC Value for total mercury, it is recommended that the area corresponding to D-2 (0-4.5'), as depicted on **Figure 3**, be monitored for worker exposure during construction. It is recommended that a mercury vapor analyzer (or equal) be used to monitor for concentrations of mercury vapor within the CWCA (breathing/work zone). The National Institute for Occupational Safety & Health (NIOSH) 8-Hour TWA Recommended Exposure Limit (REL) for mercury vapor (elemental and inorganic compounds, as Hg) is 0.05 mg/m^3 (50 µg/m^3). It is recommended that half of the REL (or 0.025 mg/m^3) be used as the action level for mercury vapor.

If the action level is exceeded during real time mercury vapor monitoring within the CWCA, it is recommended that workers within the CWCA stop work and move upwind of the area while vapors dissipate. An Engineer or Environmental Professional shall continue to monitor the CWCA closest to the bottom of the subsurface opening, once every 15 minutes. Once mercury vapor levels remain below the action level for at least 5 minutes of continuous monitoring, work may resume.

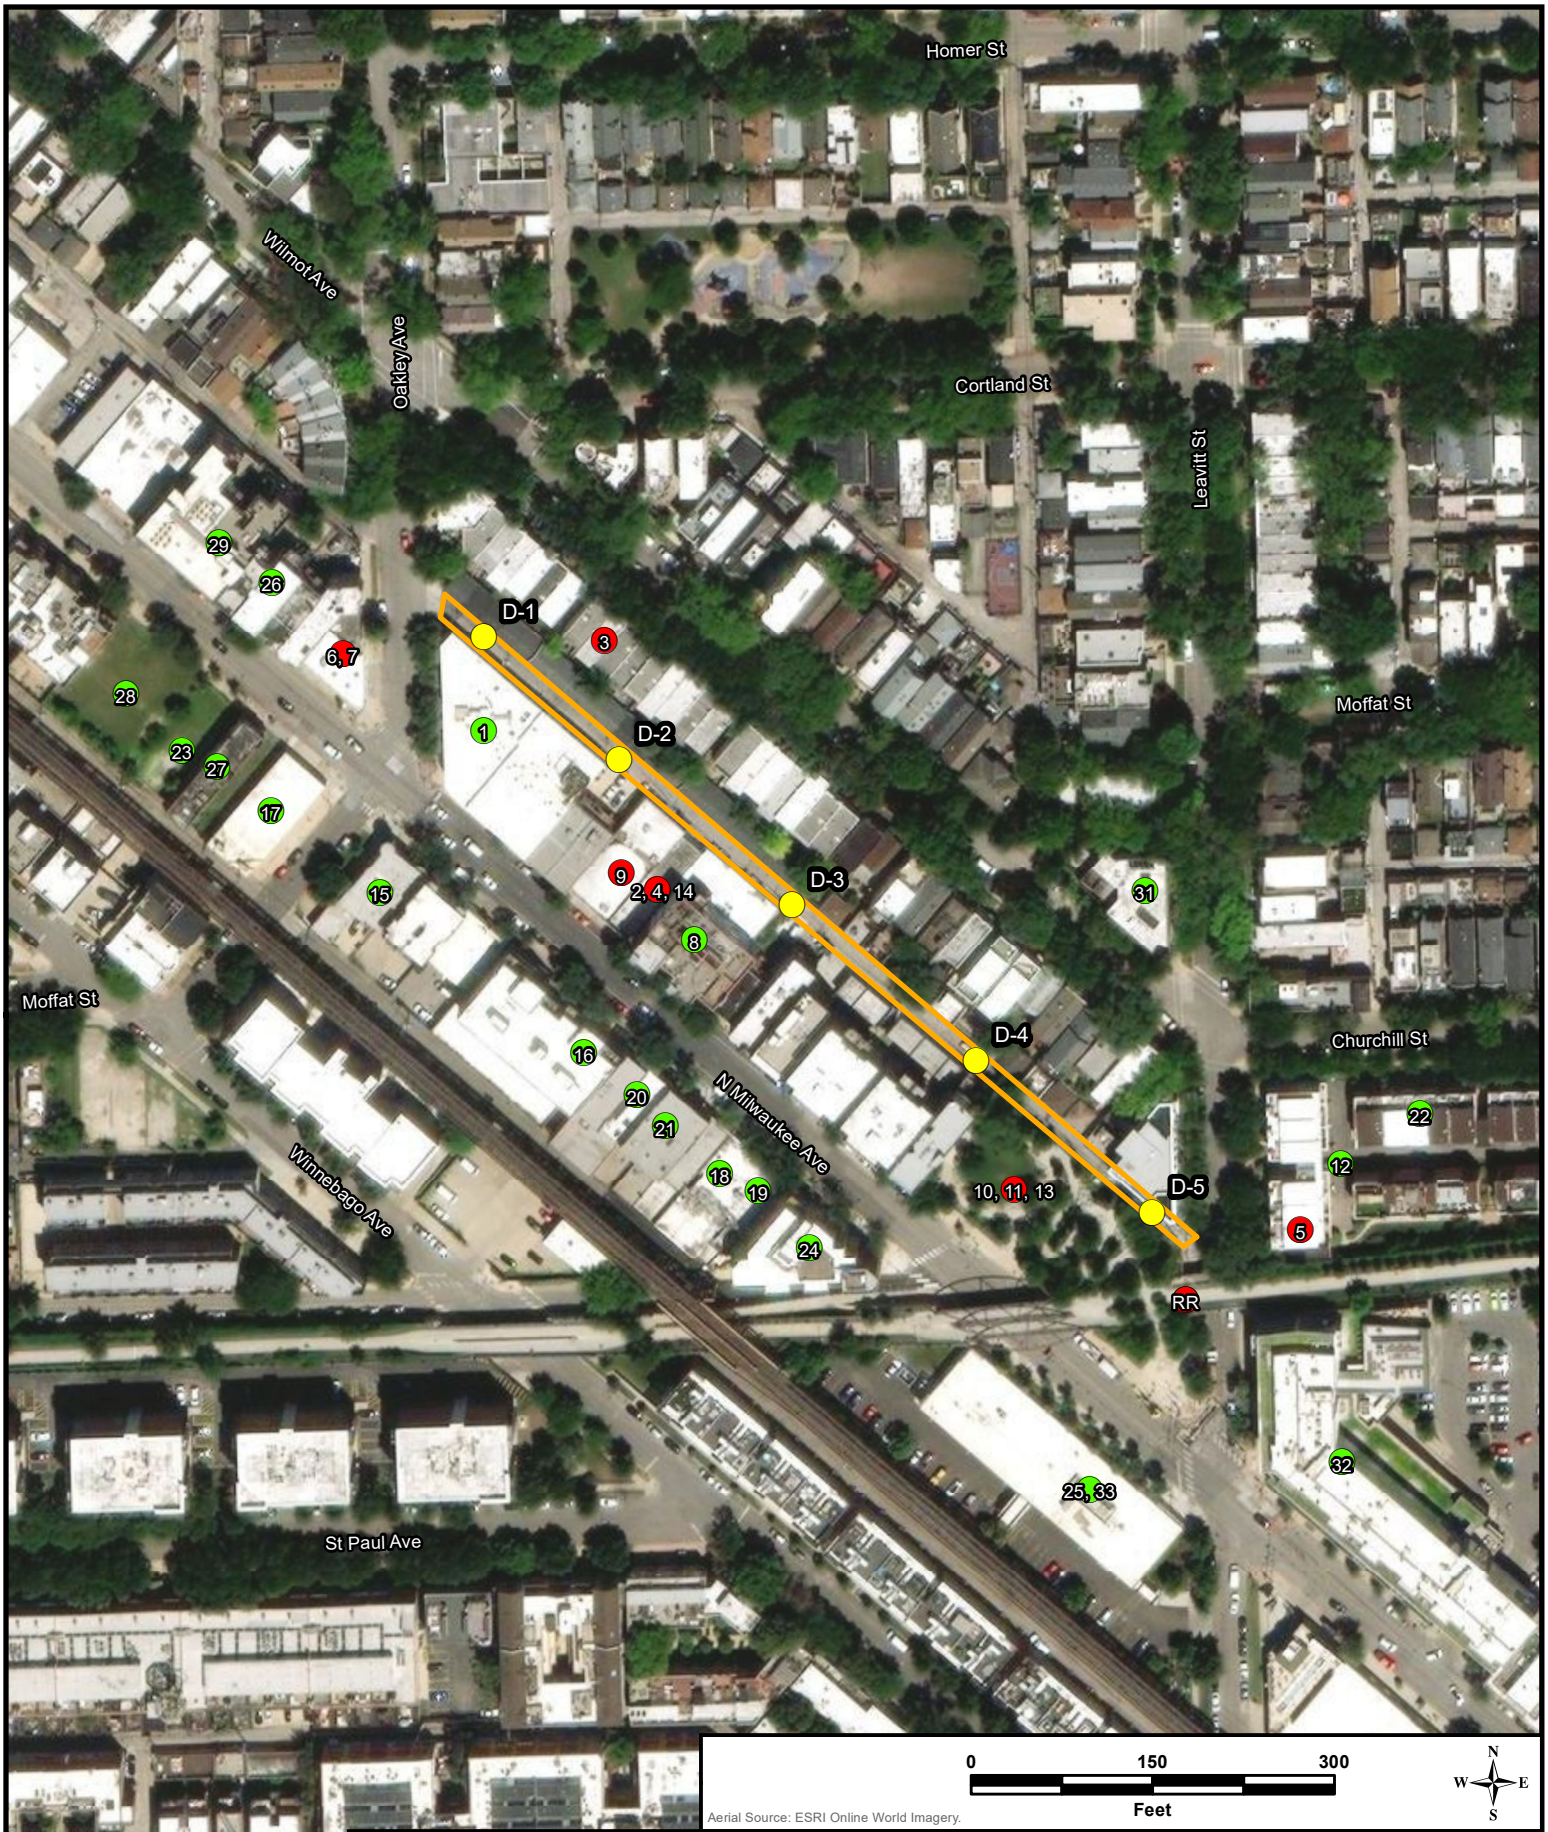

TABLE 7 – Recommended CWCA Protective Measures For Locations Exceeding Tier 1 Construction Worker ROs

Soil Boring ID	Soil Interval	CWCA Contaminant (*Action Level*)	Exposure Pathway	Recommended Monitoring	Engineering Control to Address Visible Dust / Action Level Exceedance	Recommended CW PPE
D-1	0-8'	*----------No CW Tier 1 RO Exceedances Identified----------*				
D-2	0-4'	Mercury (*0.025 mg/m^3*)	Inhalation (vapor)	Mercury vapor monitoring with mercury vapor analyzer	• If above 0.025 mg/m^3, clear workers from the CWCA and allow vapors to dissipate for at least 15 minutes • Return to excavation once mercury vapor readings are below action levels for at least 5 continuous minutes	**<u>General Use</u>**: • Gloves • Long sleeves and long pants • Protective eyewear with side shields (as applicable)
	4-8'	*----------No CW Tier 1 RO Exceedances Identified----------*				
D-3	0-8'	*----------No CW Tier 1 RO Exceedances Identified----------*				
D-4	0-8'	*----------No CW Tier 1 RO Exceedances Identified----------*				
D-5	0-8'	*----------No CW Tier 1 RO Exceedances Identified----------*				

Should conditions within the Project Area change, such as unusual staining, odors, or if loads become rejected, additional analytical assessment may be required for final disposition of spoils from this Project Area. Elevated PID readings may also result in rejected loads.

Dear Huff & Huff, Inc.:

Sterling Labs received 10 samples for the referenced project on 12/13/2023 3:11:00 PM. The analytical results are presented in the following report.

All analyses were performed in accordance with the requirements of 35 IAC Part 186 / TNI standards. Analyses were performed in accordance with methods as referenced on the analytical report. Those analytical results expressed on a dry weight basis are also noted on the analytical report.

All analyses were performed within established holding time criteria, and all Quality Control criteria met EPA or laboratory specifications except when noted in the Case Narrative or Analytical Report. If required, an estimate of uncertainty for the analyses can be provided. A listing of accredited methods/parameters can also be provided.

Thank you for the opportunity to serve you and I look forward to working with you in the future. If you have any questions regarding the enclosed materials, please contact me at (312) 733-0551.

Sincerely,

Craig Chawla

Appendix: Database Descriptions

Environmental Risk Information Services (ERIS) can search the following databases. The extent of historical information varies with each database and current information is determined by what is publicly available to ERIS at the time of update. ERIS updates databases as set out in ASTM Standard E1527-13 and E1527-21, Section 8.1.8 Sources of Standard Source Information:

"Government information from nongovernmental sources may be considered current if the source updates the information at least every 90 days, or, for information that is updated less frequently than quarterly by the government agency, within 90 days of the date the government agency makes the information available to the public."

Standard Environmental Record Sources

Federal

National Priority List: NPL

Sites on the United States Environmental Protection Agency (EPA)'s National Priorities List of the most serious uncontrolled or abandoned hazardous waste sites identified for possible long-term remedial action under the Superfund program. The NPL, which EPA is required to update at least once a year, is based primarily on the score a site receives from EPA's Hazard Ranking System. A site must be on the NPL to receive money from the Superfund Trust Fund for remedial action. Sites are represented by boundaries where available in the EPA Superfund Site Boundaries maintained by the Shared Enterprise Geodata and Services (SEGS). Site boundaries represent the footprint of a whole site, the sum of all of the Operable Units and the current understanding of the full extent of contamination; for Federal Facility sites, the total site polygon may be the Facility boundary. Where there is no polygon boundary data available for a given site, the site is represented as a point.

Government Publication Date: Oct 26, 2023

National Priority List - Proposed: PROPOSED NPL

Sites proposed by the United States Environmental Protection Agency (EPA), the state agency, or concerned citizens for addition to the National Priorities List (NPL) due to contamination by hazardous waste and identified by the EPA as a candidate for cleanup because it poses a risk to human health and/or the environment. Sites are represented by boundaries where available in the EPA Superfund Site Boundaries maintained by the Shared Enterprise Geodata and Services (SEGS). Site boundaries represent the footprint of a whole site, the sum of all of the Operable Units and the current understanding of the full extent of contamination; for Federal Facility sites, the total site polygon may be the Facility boundary. Where there is no polygon boundary data available for a given site, the site is represented as a point.

Government Publication Date: Oct 26, 2023

Deleted NPL: DELETED NPL

Sites deleted from the United States Environmental Protection Agency (EPA)'s National Priorities List. The National Oil and Hazardous Substances Pollution Contingency Plan (NCP) establishes the criteria that the EPA uses to delete sites from the NPL. In accordance with 40 CFR 300.425.(e), sites may be deleted from the NPL where no further response is appropriate. Sites are represented by boundaries where available in the EPA Superfund Site Boundaries maintained by the Shared Enterprise Geodata and Services (SEGS). Site boundaries represent the footprint of a whole site, the sum of all of the Operable Units and the current understanding of the full extent of contamination; for Federal Facility sites, the total site polygon may be the Facility boundary. Where there is no polygon boundary data available for a given site, the site is represented as a point.

SEMS List 8R Active Site Inventory: SEMS

The U.S. Environmental Protection Agency's (EPA) Superfund Program has deployed the Superfund Enterprise Management System (SEMS), which integrates multiple legacy systems into a comprehensive tracking and reporting tool. This inventory contains active sites evaluated by the Superfund program that are either proposed to be or are on the National Priorities List (NPL) as well as sites that are in the screening and assessment phase for possible inclusion on the NPL. The Active Site Inventory Report displays site and location information at active SEMS sites. An active site is one at which site assessment, removal, remedial, enforcement, cost recovery, or oversight activities are being planned or conducted. This data includes SEMS sites from the List 8R Active file as well as applicable sites from the SEMS GIS/REST file layer obtained from EPA's Facility Registry Service.

Government Publication Date: Sep 19, 2023

SEMS List 8R Archive Sites: SEMS ARCHIVE

The U.S. Environmental Protection Agency's (EPA) Superfund Enterprise Management System (SEMS) Archived Site Inventory displays site and location information at sites archived from SEMS. An archived site is one at which EPA has determined that assessment has been completed and no further remedial action is planned under the Superfund program at this time. This data includes sites from the List 8R Archived site file.

Inventory of Open Dumps, June 1985: ODI

The Resource Conservation and Recovery Act (RCRA) provides for publication of an inventory of open dumps. The Act defines "open dumps" as facilities which do not comply with EPA's "Criteria for Classification of Solid Waste Disposal Facilities and Practices" (40 CFR 257).

Government Publication Date: Jun 1985

EPA Report on the Status of Open Dumps on Indian Lands: IODI

Public Law 103-399, The Indian Lands Open Dump Cleanup Act of 1994, enacted October 22, 1994, identified congressional concerns that solid waste open dump sites located on American Indian or Alaska Native (AI/AN) lands threaten the health and safety of residents of those lands and contiguous areas. The purpose of the Act is to identify the location of open dumps on Indian lands, assess the relative health and environment hazards posed by those sites, and provide financial and technical assistance to Indian tribal governments to close such dumps in compliance with Federal standards and regulations or standards promulgated by Indian Tribal governments or Alaska Native entities.

Comprehensive Environmental Response, Compensation and Liability Information System - CERCLIS: CERCLIS

Superfund is a program administered by the United States Environmental Protection Agency (EPA) to locate, investigate, and clean up the worst hazardous waste sites throughout the United States. CERCLIS is a database of potential and confirmed hazardous waste sites at which the EPA Superfund program has some involvement. It contains sites that are either proposed to be or are on the National Priorities List (NPL) as well as sites that are in the screening and assessment phase for possible inclusion on the NPL. The EPA administers the Superfund program in cooperation with individual states and tribal governments; this database is made available by the EPA.

Government Publication Date: Oct 25, 2013

CERCLIS - No Further Remedial Action Planned: CERCLIS NFRAP

An archived site is one at which EPA has determined that assessment has been completed and no further remedial action is planned under the Superfund program at this time. The Archive designation means that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list this site on the National Priorities List (NPL). This decision does not necessarily mean that there is no hazard associated with a given site; it only means that, based upon available information, the location is not judged to be a potential NPL site.

Government Publication Date: Oct 25, 2013

CERCLIS Liens: CERCLIS LIENS

A Federal Superfund lien exists at any property where EPA has incurred Superfund costs to address contamination ("Superfund site") and has provided notice of liability to the property owner. A Federal CERCLA ("Superfund") lien can exist by operation of law at any site or property at which EPA has spent Superfund monies. This database is made available by the United States Environmental Protection Agency (EPA). This database was provided by the United States Environmental Protection Agency (EPA). Refer to SEMS LIEN as the current data source for Superfund Liens.

RCRA Sites with Controls: RCRA CONTROLS

List of Resource Conservation and Recovery Act (RCRA) facilities with institutional controls in place. RCRA gives the U.S. Environmental Protection Agency (EPA) the authority to control hazardous waste from the "cradle-to-grave." This includes the generation, transportation, treatment, storage, and disposal of hazardous waste. RCRA also set forth a framework for the management of non-hazardous solid wastes. The 1986 amendments to RCRA enabled EPA to address environmental problems that could result from underground tanks storing petroleum and other hazardous substances.

Federal Engineering Controls-ECs: FED ENG

This list of Engineering controls (ECs) is provided by the United States Environmental Protection Agency (EPA). ECs encompass a variety of engineered and constructed physical barriers (e.g., soil capping, sub-surface venting systems, mitigation barriers, fences) to contain and/or prevent exposure to contamination on a property. The EC listing includes remedy component data from Superfund decision documents issued in fiscal years 1982-2021 for applicable sites on the final or deleted on the National Priorities List (NPL); and sites with a Superfund Alternative Approach (SAA) Agreement in place. The only sites included that are not on the NPL; proposed for NPL; or removed from proposed NPL, are those with an SAA Agreement in place.

Government Publication Date: Oct 26, 2023

Federal Institutional Controls- ICs: FED INST

This list of Institutional controls (ICs) is provided by the United States Environmental Protection Agency (EPA). ICs are non-engineered instruments, such as administrative and legal controls, that help minimize the potential for human exposure to contamination and/or protect the integrity of the remedy. Although it is EPA's expectation that treatment or engineering controls will be used to address principal threat wastes and that groundwater will be returned to its beneficial use whenever practicable, ICs play an important role in site remedies because they reduce exposure to contamination by limiting land or resource use and guide human behavior at a site. The IC listing includes remedy component data from Superfund decision documents issued in fiscal years 1982-2021 for applicable sites on the final or deleted on the National Priorities List (NPL); and sites with a Superfund Alternative Approach (SAA) Agreement in place. The only sites included that are not on the NPL; proposed for NPL; or removed from proposed NPL, are those with an SAA Agreement in place.

Environmental Covenants Registry: AUL

According to the Illinois Environmental Protection Agency (Illinois EPA), the Illinois Uniform Environmental Covenants Act (UECA) (765 Illinois Compiled Statues (ILCS) 122 et seq.) creates an environmental covenant that is a specific recordable interest in real estate. It arises from an environmental response project that imposes activity and use limitations on a property. No environmental covenant is effective without the approval of the Illinois EPA, through the Director's signature. The UECA instrument recites the property use controls and remediation requirements imposed upon the property. Section 12(a) of the Illinois UECA requires the Illinois EPA to establish and maintain a registry that contains all environmental covenants and any amendment or termination of those covenants.

Toxics Release Inventory (TRI) Program: TRIS

The U.S. Environmental Protection Agency's Toxics Release Inventory (TRI) is a database containing data on disposal or other releases of toxic chemicals from U.S. facilities and information about how facilities manage those chemicals through recycling, energy recovery, and treatment. There are currently 770 individually listed chemicals and 33 chemical categories covered by the TRI Program. Facilities that manufacture, process or otherwise use these chemicals in amounts above established levels must submit annual reporting forms for each chemical. Note that the TRI chemical list does not include all toxic chemicals used in the U.S. One of TRI's primary purposes is to inform communities about toxic chemical releases to the environment.

PFOA/PFOS Contaminated Sites: PFAS NPL

This list of Superfund Sites with Per- and Polyfluoroalkyl Substances (PFAS) detections is made available by the U.S. Environmental Protection Agency (EPA) in their PFAS Analytic Tools data, previously the list was obtained by EPA FOIA requests. EPA's Office of Land and Emergency Management and EPA Regional Offices maintain what is known about site investigations, contamination, and remedial actions under the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA) where PFAS is present in the environment. Limitations: Detections of PFAS at National Priorities List (NPL) sites do not mean that people are at risk from PFAS, are exposed to PFAS, or that the site is the source of the PFAS. The information in the Superfund NPL and Superfund Alternative Agreement (SAA) PFAS detection site list is years old and may not be accurate today. Site information such as site name, site ID, and location has been confirmed for accuracy; however, PFAS-related information such as media sampled, drinking water being above the health advisory, or mitigation efforts has not been verified. For Federal Facilities data, the other Federal agencies (OFA) are the lead agency for their data and provided them to EPA.

Federal Agency Locations with Known or Suspected PFAS Detections: PFAS FED SITES

List of Federal agency locations with known or suspected detections of Per- and Polyfluoroalkyl Substances (PFAS), made available by the U.S. Environmental Protection Agency (EPA) in their PFAS Analytic Tools data. EPA outlines that these data are gathered from several federal entities, such as the Federal Superfund program, Department of Defense (DOD), National Aeronautics and Space Administration, Department of Transportation, and Department of Energy. The dates this data was extracted for the PFAS Analytic Tools range from March 2022 to September 2023. Sites on this list do not necessarily reflect the source/s of PFAS contamination and detections do not indicate level of risk or human exposure at the site. Agricultural notifications in this data are limited to DOD sites only. At this time, the EPA is aware that this list is not comprehensive of all Federal agencies.

SSEHRI PFAS Contamination Sites: PFAS SSEHRI

This PFAS Contamination Site Tracker database is compiled by the Social Science Environmental Health Research Institute (SSEHRI) at Northeastern University. According to the SSEHRI, the database records qualitative and quantitative data from each known site of PFAS contamination, including timeline of discovery, sources, levels, health impacts, community response, and government response. The goal of this database is to compile information and support public understanding of the rapidly unfolding issue of PFAS contamination. All data presented was extracted from government websites, news articles, or publicly available documents, and this is cited in the tracker. Locations for the Known PFAS Contamination Sites are sourced from the PFAS Sites and Community Resources Map, credited to the Northeastern University's PFAS Project Lab, Silent Spring Institute, and the PFAS-REACH team. Disclaimer: The source conveys the data undergoes regular updates as new information becomes available, some sites may be missing and/or contain information that is incorrect or outdated, as well as their information represents all contamination sites SSEHRI is aware of, not all possible contamination sites. This data is not intended to be used for legal purposes. Access the following source link for the most current information: https://pfasproject.com/pfas-sites-and-community-resources/

National Response Center PFAS Spills: ERNS PFAS

This Per- and Poly-Fluoroalkyl Substances (PFAS) Spills dataset is made available via the U.S. Environmental Protection Agency's (EPA) PFAS Analytic Tools. The National Response Center (NRC), operated by the U.S. Coast Guard, is the designated federal point of contact for reporting all oil, chemical, and other discharges into the environment, for the United States and its territories. This dataset contains NRC spill information from 1990 to the present that is restricted to records associated with PFAS and PFAS-containing materials. Incidents are filtered to include only records with a "Material Involved" or "Incident Description" related to Aqueous Film Forming Foam (AFFF). The keywords used to filter the data included "AFFF," "Fire Fighting Foam," "Aqueous Film Forming Foam," "Fire Suppressant Foam, "PFAS," "PERFL," "PFOA," "PFOS," and "Genx." Limitations: The data from the NRC website contains initial incident data that has not been validated or investigated by a federal/state response agency. Keyword searches may misidentify some incident reports that do not contain PFAS. This dataset should also not be considered to be exhaustive of all PFAS spills/release incidents.

PFAS NPDES Discharge Monitoring: PFAS NPDES

This list of National Pollutant Discharge Elimination System (NPDES) permitted facilities with required monitoring for Per- and Polyfluoroalkyl (PFAS) Substances is made available via the U.S. Environmental Protection Agency (EPA)'s PFAS Analytic Tools. Any point-source wastewater discharger to waters of the United States must have a NPDES permit, which defines a set of parameters for pollutants and monitoring to ensure that the discharge does not degrade water quality or impair human health. This list includes NPDES permitted facilities associated with permits that monitor for Per- and Polyfluoroalkyl Substances (PFAS), limited to the years 2007 - present. EPA further advises the following regarding these data: currently, fewer than half of states have required PFAS monitoring for at least one of their permittees, and fewer states have established PFAS effluent limits for permittees. For states that may have required monitoring, some reporting and data transfer issues may exist on a state-by-state basis.

Encompasses Toxics Release Inventory records included in the EPA PFAS Analytic Tools. The EPA's TRI database currently tracks information on disposal or releases of 770 individually listed toxic chemicals and 33 chemical categories from thousands of U.S. facilities and details about how facilities manage those chemicals through recycling, energy recovery, and treatment.

PFAS TSCA Manufacture and Import Facilities: PFAS TSCA

The U.S. Environmental Protection Agency (EPA) issued the Chemical Data Reporting (CDR) Rule under the Toxic Substances Control Act (TSCA) and requires chemical manufacturers and facilities that manufacture or import chemical substances to report data to EPA. This list is specific only to TSCA Manufacture and Import Facilities with reported per- and poly-fluoroalkyl (PFAS) substances. Data file is sourced from EPA's PFAS Analytic Tools TSCA dataset which includes CDR/Inventory Update Reporting data from 1998 up to 2020. Disclaimer: This data file includes production and importation data for chemicals identified in EPA's CompTox Chemicals Dashboard list of PFAS without explicit structures and list of PFAS structures in DSSTox. Note that some regulations have specific chemical structure requirements that define PFAS differently than the lists in EPA's CompTox Chemicals Dashboard. Reporting information on manufactured or imported chemical substance amounts should not be compared between facilities, as some companies claim Chemical Data Reporting Rule data fields for PFAS information as Confidential Business Information.

PFAS Waste Transfers from RCRA e-Manifest : PFAS E-MANIFEST

This Per- and Poly-Fluoroalkyl Substances (PFAS) Waste Transfers dataset is made available via the U.S. Environmental Protection Agency's (EPA) PFAS Analytic Tools. Every shipment of hazardous waste in the U.S. must be accompanied by a shipment manifest, which is a critical component of the cradle-to-grave tracking of wastes mandated by the Resource Conservation and Recovery Act (RCRA). According to the EPA, currently no Federal Waste Code exists for any PFAS compounds. To work around the lack of PFAS waste codes in the RCRA database, EPA developed the PFAS Transfers dataset by mining e-Manifest records containing at least one of these common PFAS keywords: • PFAS • PFOA • PFOS • PERFL • AFFF • GENX • GEN-X (plus the Vermont state-specific waste codes). Limitations: Amount or concentration of PFAS being transferred cannot be determined from the manifest information. Keyword searches may misidentify some manifest records that do not contain PFAS. This dataset should also not be considered to be exhaustive of all PFAS waste transfers.

PFAS Industry Sectors: PFAS IND

This Per- and Poly-Fluoroalkyl Substances (PFAS) Industry Sectors dataset is made available via the U.S. Environmental Protection Agency's (EPA) PFAS Analytic Tools. The EPA developed the dataset from various sources that show which industries may be handling PFAS including: EPA's Enforcement and Compliance History Online (ECHO) records restricted to potential PFAS-handling industry sectors; ECHO records for Fire Training Sites identified where fire-fighting foam may have been used in training exercises; and 14 CFR Part 139 Airports compiled from historic and current records from the FAA Airport Data and Information Portal. Since July 2006, all certificated Part 139 Airports are required to have fire-fighting foam onsite that meet certain military specifications, which to date have been fluorinated (Aqueous Film Forming Foam). Limitations: Inclusion in this dataset does not indicate that PFAS are being manufactured, processed, used, or released by the facility. Listed facilities potentially handle PFAS based on their industrial profile, but are unconfirmed by the EPA. Keyword searches in ECHO for Fire Training sites may misidentify some facilities and should not be considered to be an exhaustive list of fire training facilities in the U.S.

Toxic Substances Control Act: TSCA

The Environmental Protection Agency (EPA) is amending the Toxic Substances Control Act (TSCA) section 8(a) Inventory Update Reporting (IUR) rule and changing its name to the Chemical Data Reporting (CDR) rule.

This includes current information on chemical substance production volumes, manufacturing sites, and how the chemical substances are used. This information helps the Agency determine whether people or the environment are potentially exposed to reported chemical substances. EPA publishes submitted CDR data that is not Confidential Business Information (CBI).

Integrated Compliance Information System (ICIS): ICIS
The Integrated Compliance Information System (ICIS) database contains integrated enforcement and compliance information across most of U.S. Environmental Protection Agency's (EPA) programs. The vision for ICIS is to replace EPA's independent databases that contain enforcement data with a single repository for that information. Currently, ICIS contains all Federal Administrative and Judicial enforcement actions and a subset of the Permit Compliance System (PCS), which supports the National Pollutant Discharge Elimination System (NPDES). This information is maintained by the EPA Headquarters and at the Regional offices. A future release of ICIS will completely replace PCS and will integrate that information with Federal actions already in the system. ICIS also has the capability to track other activities that support compliance and enforcement programs, including incident tracking, compliance assistance, and compliance monitoring.

Former Military Nike Missile Sites: FORMER NIKE

This information was taken from report DRXTH-AS-IA-83A016 (Historical Overview of the Nike Missile System, 12/1984) which was performed by Environmental Science and Engineering, Inc. for the U.S. Army Toxic and Hazardous Materials Agency Assessment Division. The Nike system was deployed between 1954 and the mid-1970's. Among the substances used or stored on Nike sites were liquid missile fuel (JP-4); starter fluids (UDKH, aniline, and furfuryl alcohol); oxidizer (IRFNA); hydrocarbons (motor oil, hydraulic fluid, diesel fuel, gasoline, heating oil); solvents (carbon tetrachloride, trichloroethylene, trichloroethane, stoddard solvent); and battery electrolyte. The quantities of material a disposed of and procedures for disposal are not documented in published reports. Virtually all information concerning the potential for contamination at Nike sites is confined to personnel who were assigned to Nike sites. During deactivation most hardware was shipped to depot-level supply points. There were reportedly instances where excess materials were disposed of on or near the site itself at closure. There was reportedly no routine site decontamination.

Registered Pesticide Establishments: SSTS

This national list of active EPA-registered foreign and domestic pesticide and/or device-producing establishments is based on data from the Section Seven Tracking System (SSTS). The Federal Insecticide, Fungicide, and Rodenticide Act (FIFRA) Section 7 requires that each producing establishment must place its EPA establishment number on the label or immediate container of each pesticide, active ingredient or device produced. An EPA establishment number on a pesticide product label identifies the EPA registered location where the product was produced. The list of establishments is made available by the U.S. Environmental Protection Agency (EPA).

Definitions

Database Descriptions: This section provides a detailed explanation for each database including: source, information available, time coverage, and acronyms used. They are listed in alphabetic order.

Detail Report: This is the section of the report which provides the most detail for each individual record. Records are summarized by location, starting with the project property followed by records in closest proximity.

Distance: The distance value is the distance between plotted points, not necessarily the distance between the sites' boundaries. All values are an approximation.

Direction: The direction value is the compass direction of the site in respect to the project property and/or center point of the report.

Elevation: The elevation value is taken from the location at which the records for the site address have been plotted. All values are an approximation. Source: Google Elevation API.

Executive Summary: This portion of the report is divided into 3 sections:

'Report Summary'- Displays a chart indicating how many records fall on the project property and, within the report search radii.

'Site Report Summary'-Project Property'- This section lists all the records which fall on the project property. For more details, see the 'Detail Report' section.

'Site Report Summary-Surrounding Properties'- This section summarizes all records on adjacent properties, listing them in order of proximity from the project property. For more details, see the 'Detail Report' section.

Map Key: The map key number is assigned according to closest proximity from the project property. Map Key numbers always start at #1. The project property will always have a map key of '1' if records are available. If there is a number in brackets beside the main number, this will indicate the number of records on that specific property. If there is no number in brackets, there is only one record for that property.

The symbol and colour used indicates 'elevation': the red inverted triangle will dictate 'ERIS Sites with Lower Elevation', the yellow triangle will dictate 'ERIS Sites with Higher Elevation' and the orange square will dictate 'ERIS Sites with Same Elevation.'

Unplottables: These are records that could not be mapped due to various reasons, including limited geographic information. These records may or may not be in your study area, and are included as reference.

Re: **Infiltration Testing Memo: 2023 CDOT NCI Green Alley Program**
NCI Central Area, Ward 32, Alley 22-CP#53

Huff & Huff, Inc., a subsidiary of GZA, Inc. (H&H/GZA) mobilized to the alley bounded by N. Wilmont Avenue to the north, N. Leavitt Street to the east, N. Milwaukee Avenue to the south, and N. Oakley Avenue to the west, in Chicago, Cook County, Illinois (Project Area). Infiltration testing suitability was assessed in conjunction with the 22-CP#53 soils Clean Construction or Demolition Debris (CCDD) assessment performed on December 13, 2023.

Soil samples were collected as part of the 22-CP#53 soils CCDD assessment from five (5) locations (D-1, D-2, D-3, D-4, and D-5) in the alley to a maximum depth of approximately eight (8) feet below ground surface (bgs). Soils observed in the alley consisted primarily urban fill material from the surface to approximately 4.5 feet bgs, underlain by lean CLAY or sandy lean clay to an approximate depth range of 0 feet to 8 feet bgs.

Based on the soil conditions assessed in the field, an infiltration test was not conducted. Soil permeability is typically poor to very poor in clay material. Based on prior infiltration testing conducted by H&H/GZA in other alley improvement projects for CDOT with similar soil conditions, and where an infiltration rate was not reported due to no water movement, conducting an infiltration test in alley 22-CP#53 was considered to not be suitable or cost effective. The elimination of testing is consistent with the protocol for field assessment of infiltration testing, which is attached for reference.

Therefore, an estimated static hydraulic conductivity value was not established for this project; however, it appears that the subsurface materials are not conducive to permeable design options.

Attached is a Soil Boring Location Map and Boring Logs for reference to soil conditions.

NCI Central Area, Ward 32, Alley 22-CP#53

On December 13, 2023, Huff & Huff, Inc., a subsidiary of GZA, Inc. (H&H/GZA), mobilized to the alley bounded by N. Wilmont Avenue to the north, N. Leavitt Street to the east, N. Milwaukee Avenue to the south, and N. Oakley Avenue to the west, in Chicago, Cook County, Illinois (Project Area).

Seven (7) potentially impacted properties (PIPs) were identified near the Project Area, based on environmental due diligence, including review of regulatory database listings, historical aerial photographs, and a site visit in connection with the Project Area. Based on the identified PIPs, as well as the location in Chicago and the potential to encounter urban fill material, an LPC-663 form with accompanying analytical testing results was appropriate for the Project Area. Five (5) soil borings were advanced within the Project Area, corresponding to the areas of planned excavation/soil disposal, as depicted on the figures included in **Attachment A**. Soil borings D-1 through D-5 were advanced on December 13, 2023, to a depth of approximately eight (8) feet below ground surface (bgs), and representative soil samples from each boring were collected and submitted for laboratory analysis.

Samples were analyzed for one or more of the following analytical suites: volatile organic compounds (VOCs); polynuclear aromatic hydrocarbons (PNAs); total Resource Conservation and Recovery Act (RCRA) metals; Toxicity Characteristic Leaching Procedure (TCLP) chromium; TCLP lead; and soil pH.

The following tables present the results from soil sampling:

Field Observations and Analytical Summary

On December 13, 2023, H&H/GZA collected representative soil samples from five (5) soil borings within the Project Area, as displayed on the figures included in **Attachment A**. Soil borings D-1, D-2, D-3, D-4, and D-5 were advanced to approximately 8 feet bgs. Boring logs are included in **Attachment C**. Samples were screened with the photoionization detector (PID) meter, with results at background levels of 0.0 parts per million (ppm) for each sample interval. Urban fill material was observed in borings D-1, D-2, D-3, and D-4, containing one or more

waste/debris items, including cinders, coal, porcelain, and/or wood. Borings D-5 was not noted to contain waste or debris items in the urban fill material. Based on the identified PIPs, PID screening results, and on-site observations, samples were analyzed for specific parameters, as presented in **Table 2**.

According to Illinois Department of Transportation (IDOT) Standard Specifications for Road and Bridge Construction, Section 669.05 (Removal and Disposal of Regulated Substances – Contaminated Soil and/or Groundwater Management and Disposal), the following areas shall be managed as follows:

669.05 Regulated Substances Management and Disposal

(a) Soil Types: *"Soil Analytical Results Exceed Most Stringent MAC. When the soil analytical results indicate detected levels exceed the most stringent maximum allowable concentration (MAC) for chemical constituents in soil established pursuant to Subpart F of 35 Ill. Adm. Code 1100.605, the soil shall be managed as follows:"*

Spoils generated from D-3 (4-8') are classified as 669.05(a)(2):

- "*When analytical results indicate inorganic chemical constituents exceed the most stringent MAC but do not exceed the MAC for a Metropolitan Statistical Area (MSA) County identified in 35 Ill. Spoils generated from D-1 (0-4'), D-2 (0-4.5'), D-3 (0-4'), D-4 (0-4'), and D-5 (4-8') are classified as 669.05(a)(5):

- "*When the Engineer determines soil cannot be managed according to Articles 669.05(a)(1) through (a)(4) above and the materials do not contain special waste or hazardous waste, as determined by the Engineer, the soil shall be managed and disposed of at a landfill as a non-special waste*."
- Soils Management Summary (per Article 669.05 of the IDOT Construction Manual)*: "Disturbed soil must be managed and disposed of at a properly permitted landfill as non-special waste. The Contractor must provide a signed letter specifying the proposed disposal facility and documentation the landfill is permitted to accept the regulated soil. The Contractor is also responsible for providing the Waste Material Profile and Generator's Non-Special Waste Certification."*

[1] Based on maximum excavation depth planned per Contract Plans. To avoid summarizing the full boring depth based on most-restrictive soil classification per sample depths analyzed, multiple options are summarized based on planned excavation depth throughout Project Area.

[2] "Unrestricted" refers to material that is approved for CCDD disposal at any facility location (e.g., Within Chicago Corporate Limits, Within a Populated Area in a MSA County, Within a Populated Area in Non-MSA County, and Outside a Populated Area).

Bold/Shaded Refers to areas which are within a **CCDD Exclusion Area**.

Bold/Shaded Refers to areas which are within a **CCDD Exclusion Area AND** within a **Construction Worker Caution Area**.

Discussion of CW Caution Area(s)

Based on analytical results for mercury from sample D-2 (0-4), a **Construction Worker Caution Area (CWCA)** has been identified for the following area(s), as depicted in the attached figures. The CWCA is additionally discussed in the CCDD Narrative, dated June 2024, submitted under a separate cover.

- D-2: Construction Worker Inhalation (mercury) from ground surface to approximately 4.5 feet bgs

Materials generated for landfilling as part of the CDOT Neighborhood Capital Improvement (NCI) Program Central Area shall be managed and disposed as Non-Special Waste at the Waste Management (WM) Laraway landfill facility.

If materials generated from the project are designated as 669.05(a)(5) spoils or other spoils and to be disposed of at a licensed landfill operation, CDOT/CDOT's consultant must be notified if spoils are taken to a landfill other than Waste Management. Waste Management has requested that drivers bring two copies of the Industrial Waste Tracking Receipt with them on the first load each day. If spoils are disposed of at a landfill other than Waste Management, a separate landfill profile must be obtained and coordinated with CDOT.

Dear Huff & Huff, Inc.:

Sterling Labs received 10 samples for the referenced project on 12/13/2023 3:11:00 PM. The analytical results are presented in the following report.

All analyses were performed in accordance with the requirements of 35 IAC Part 186 / TNI standards. Analyses were performed in accordance with methods as referenced on the analytical report. Those analytical results expressed on a dry weight basis are also noted on the analytical report.

All analyses were performed within established holding time criteria, and all Quality Control criteria met EPA or laboratory specifications except when noted in the Case Narrative or Analytical Report. If required, an estimate of uncertainty for the analyses can be provided. A listing of accredited methods/parameters can also be provided.

Thank you for the opportunity to serve you and I look forward to working with you in the future. If you have any questions regarding the enclosed materials, please contact me at (312) 733-0551.

Sincerely,
